Email ID: sec23mu048@sairamtap.edu.in

Executive Summary:

Highly motivated and adaptable Mechanical and Automation Engineering enthusiast, driven by a keen interest in structural mechanics, product development and designing. Worked as a mechanical co lead in an autonomous rover team, achieved First Runner-Up in International Rover Challenge 2026. Seeking opportunities to apply design and product development in the mechanical engineering industry.

Education:

Sri Sairam Engineering College

2023 – Present

B.E Mechanical and Automation Engineering - CGPA : 7.25

Technical Skills:

- Designing Tools : Solid Works, Auto CAD, Fusion 360
- Engineering : DFMA, DFAM, Robot simulation, Design Optimization
- Manufacturing : 3D Printing & slicing operations, Laser Cutting, Welding, Lathe Operation, Prototype Development, Testing & Validation, Manufacturing Process Planning
- Soft Skills: Agile learning, leadership quality, clear & concise communicator and effective listener, critical thinking, problem solving, effective team dynamics.

Experience:

Ad-Astra Autonomous rover

March 2025 – Current

Role: Co-Lead in mechanical subsystem

Responsibility:

- Designed and fabricated a science module in SS sheet metal with 0.8mm thickness in rover, which is assigned to execute various science tasks.
- Designed and fabricated the wheels of the rover using the TPU material, with two iterations.
- Translated theoretical engineering principles, material selection, and subject knowledge into practical, hands-on R&D testing and manufacturing processes.
- Contributed in customized 19:1 cycloidal gear development.
- Demonstrated end-to-end hands-on expertise in sheet metal design, Design for Manufacturing and assembly (DFMA), Design For Additive Manufacturing (DFAM), fabrication, and functional prototyping, Partnered with multidisciplinary engineering students.

Delphi TVS
Role: Intern/student

30 Days

Responsibility:

- Testing & Diagnostics: Conducted component-level durability and functional testing, documenting real-time performance data to assist the R&D team in root-cause analysis and design validation.
- Engine & Test Bed Operations: Assisted R&D engineers in setting up and operating engine test cells to record critical performance metrics, including fuel discharge rate, pressure mapping, and operational efficiency.
- Fuel Injection & Nozzle Manufacturing: Hands-on involvement in the precision manufacturing, micro-assembly, and tolerance testing of diesel fuel injection nozzles to meet strict OEM quality specs.
- Assembly & Chassis Systems: Worked across assembly line workflows and chassis component testing, gaining direct exposure to lean manufacturing practices, standard operating procedures (SOPs), and defect reduction.

Waste to watts
Role: R&D Engineer

Jan 2024 – Current

Responsibility:

- Analysed performance data and identified improvement opportunities.
- Designed the anode and cathode chamber for the system with calculations.
- Evaluated design alternatives, system feasibility, assisted in prototype development and testing.
- Collaborated with team members on design optimization.

Awards & Accomplishments:

-
- IRC 2026: Emerged as first runner-up.
 - URC 2025: Shortlisted as the sole team representing India.
 - ASME TN-NOVATE 2.0 2025: Secured 2nd place in HVAC system product development
 - IRC 2025: Ranked as 15th position globally.
